

SAVE TIME & COSTS
WITH OUR LABEL SOLUTIONS

>> Eco-Labels

How we can help!

>> Recycling

Here at Xact we are constantly reviewing our waste management program to minimise the impact our labels have on the environment. With a focus on continuing improvement, here at Xact we uphold a responsibility to the environment.

>> Eco-friendliness

Does your company portray an eco-friendly image, or want to? Xact offers labels that can be recycled or are biodegradable.

>> Eco-sensitive adhesives

We can offer adhesives that are recyclable as well as adhesives that can be cleanly removed from the product along with their facestocks. This allows for container reuse or easy separation during the recycling process.

>> Renewable products

- Our Renewable labelling materials include:
- Clear and white PLA, a corn-based film that is compostable.
- Clear and white Natureflex, a biodegradable wood pulp based product made from a pulp taken from sustainable forests.
- Tree-Free, a paper facestock that is made from bamboo, bagasse and cotton linters.

>> Dissolvable

We can print on dissolvable papers that will dissolve in warm water. These are matched up with adhesives that will wash away. A great alternative for products that don't need a label that matches the products (its attached to), lifecycle.
